

Algorithms

Computing

Algorithms:

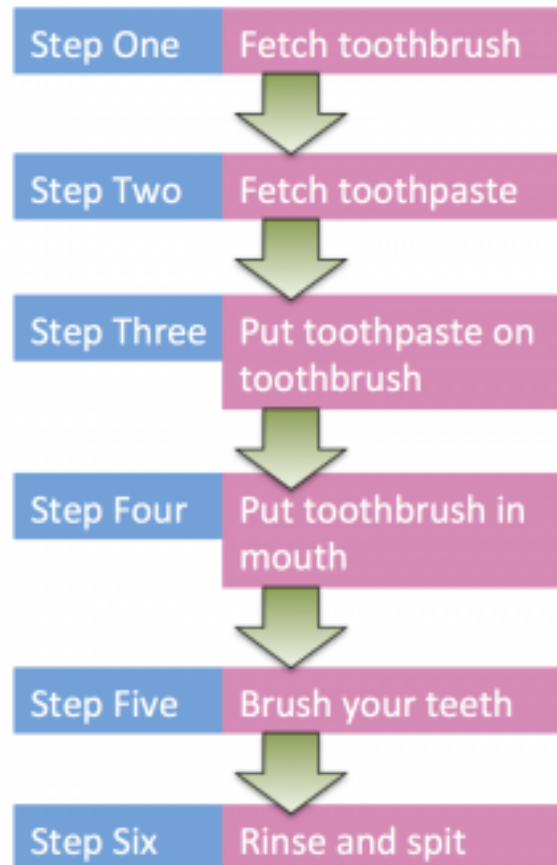

An algorithm is a set of instructions that are followed to achieve a task. We give computers instructions in code, a language computers can understand.

Scratch JR:

Scratch jr. is a program that we can use in order to code our own stories and animations. It involves sprites (characters on the screen).

We use algorithms (a set of instructions to perform a task) to program the sprite to do different things.

Example of an algorithm

Glossary

Algorithm: Precise instructions that achieve a task.

Instruction: How something should be done.

Program: Instructions written in a language (code) computers can understand.

Scratch JR: Scratch is a website/ app that lets us code our own stories, games and animations.

Sequence: A particular order to follow.
